## COLEOPTERA FROM WYRE FOREST

David Smith

Note from Rosemary

The information listed below has been collected by Dr. David Smith, Lecturer in the Institute of Archaeology and Antiquity, University of Birmingham. It is a fascinating record of many beetles, some of which have not, I think, been recorded in Wyre before.

### Sampling Locations

- A** Garden of the Newalls, Far Forest (SO728758). From tall grasses, nettles and compost shaking. Includes Dowles Brook (SO728761) on 2/5/92.
- B** Dung from pasture behind the Newalls, Far Forest (SO728759).
- C** In vegetation within main forest block to north of Dowles Brook and along the Brook (SO7476, SO7376).
- D** In vegetation along "red walk" to north of forest visitor centre and from the borehole pool (SO746750).
